About Me

I am a hardworking results-oriented team player and go-getter who thinks outside the box with synergy. I am looking for a job where I can use my skills. I am a fast learner and a coding ninja.

Technical Skills

Python, Kubernetes, TensorFlow, PyTorch, GraphQL, Java, Docker, AWS, React

Experiance

Junior Helper | Web Co (2022 - 2023)
• Responsible for working on backend tasks and helped with bug fixes.
• Assisted with the the database and worked with clients.
• I handled software enginering tasks as part of the team and did mangement.
• Worked on writing code in Python and attended meetings.

This is a very long paragraph of continuous text where I describe my daily duties at my previous job without using any bullet points whatsoever. I was involved in many meetings and helped out wherever I could, doing whatever tasks were assigned to me by the supervisor and working late when needed, but without any specific measurable metrics or data to support my claims.
